

Are you a health care professional? Handle with care!

#handlewithcare

Older LGBTI people may not come out to the doctor. Older LGBTI people may hesitate to make an appointment. Older LGBTI people may not go for treatment even when they desperately need one. Health surveys show that older LGBTI people are more likely to delay or not seek medical care at all, and that's because older LGBTI people often fear discrimination when they need health care services.

Each one of us should always be careful, be encouraging to handle our older LGBTI patients with care!
